2 ABSTRACT

3 Equivalent-layer technique is a powerful tool for processing potential-field data in the space
4 domain. However, the greatest hindrance for using the equivalent-layer technique is its high
5 computational cost for processing massive data sets. The large amount of computer memory
6 usage to store the full sensitivity matrix combined with the computational time required for
7 matrix-vector multiplications and to solve the resulting linear system, are the main drawbacks
8 that made unfeasible the use of the equivalent-layer technique for a long time. More recently, the
9 advances in computational power propelled the development of methods to overcome the heavy
10 computational cost associated with the equivalent-layer technique. We present a comprehensive
11 review of the computation aspects concerning the equivalent-layer technique addressing how
12 previous works have been dealt with the computational cost of this technique. Historically, the
13 high computational cost of the equivalent-layer technique has been overcome by using a variety of
14 strategies such as: moving data-window scheme, equivalent data concept, wavelet compression,
15 quadtree discretization, reparametrization of the equivalent layer by a piecewise-polynomial
16 function, iterative scheme without solving a system of linear equations and the convolutional
17 equivalent layer using the concept of block-Toeplitz Toeplitz-block (BTTB) matrices. We compute
18 the number of floating-point operations of some of these strategies adopted in the equivalent
19 layer technique to show their effectiveness in reducing the computational demand. Numerically,
20 we also address the stability of some of these strategies used in the equivalent layer technique
21 by comparing with the stability via the classic equivalent-layer technique with the zeroth-order
22 Tikhonov regularization.

23 **Keywords:** equivalent layer, gravimetry, fast algorithms, computational cost, stability analysis

1 INTRODUCTION

24 For Original Research Articles (Name et al., 1996), Clinical Trial Articles (LastName1 et al., 2013), and
25 Technology Reports (Surname1, 2010), the introduction should be succinct, with no subheadings (Name,

1993). For Case Reports the Introduction should include symptoms at presentation (Surname, 2002), physical exams and lab results (LastName1 et al., 2011).

2 ARTICLE TYPES

For requirements for a specific article type please refer to the Article Types on any Frontiers journal page. Please also refer to Author Guidelines for further information on how to organize your manuscript in the required sections or their equivalents for your field

3 MANUSCRIPT FORMATTING

3.1 Heading Levels

3.2 Level 2

3.2.1 Level 3

3.2.1.1 Level 4

3.2.1.1.1 Level 5

3.3 Equations

Equations should be inserted in editable format from the equation editor.

$$\sum x + y = Z \quad (1)$$

3.4 Figures

Frontiers requires figures to be submitted individually, in the same order as they are referred to in the manuscript. Figures will then be automatically embedded at the bottom of the submitted manuscript. Kindly ensure that each table and figure is mentioned in the text and in numerical order. Figures must be of sufficient resolution for publication. Figures which are not according to the guidelines will cause substantial delay during the production process. Please see here for full figure guidelines. Cite figures with subfigures as figure 2a and 2b.

3.4.1 Permission to Reuse and Copyright

Figures, tables, and images will be published under a Creative Commons CC-BY licence and permission must be obtained for use of copyrighted material from other sources (including re-published/adapted/modified/partial figures and images from the internet). It is the responsibility of the authors to acquire the licenses, to follow any citation instructions requested by third-party rights holders, and cover any supplementary charges.

3.5 Tables

Tables should be inserted at the end of the manuscript. Please build your table directly in LaTeX. Tables provided as jpeg/tiff files will not be accepted. Please note that very large tables (covering several pages) cannot be included in the final PDF for reasons of space. These tables will be published as Supplementary Material on the online article page at the time of acceptance. The author will be notified during the typesetting of the final article if this is the case.

4 NOMENCLATURE

57 4.1 Resource Identification Initiative

58 To take part in the Resource Identification Initiative, please use the corresponding catalog number and
59 RRID in your current manuscript. For more information about the project and for steps on how to search
60 for an RRID, please click [here](#).

61 4.2 Life Science Identifiers

62 Life Science Identifiers (LSIDs) for ZOOBANK registered names or nomenclatural acts should be listed
63 in the manuscript before the keywords. For more information on LSIDs please see the Nomenclature
64 section of the guidelines.

5 ADDITIONAL REQUIREMENTS

65 For additional requirements for specific article types and further information please refer to the individual
66 Frontiers journal pages

CONFLICT OF INTEREST STATEMENT

67 The authors declare that the research was conducted in the absence of any commercial or financial
68 relationships that could be construed as a potential conflict of interest.

AUTHOR CONTRIBUTIONS

69 The Author Contributions section is mandatory for all articles, including articles by sole authors. If an
70 appropriate statement is not provided on submission, a standard one will be inserted during the production
71 process. The Author Contributions statement must describe the contributions of individual authors referred
72 to by their initials and, in doing so, all authors agree to be accountable for the content of the work. Please
73 see [here](#) for full authorship criteria.

FUNDING

74 Details of all funding sources should be provided, including grant numbers if applicable. Please ensure to
75 add all necessary funding information, as after publication this is no longer possible.

ACKNOWLEDGMENTS

76 This is a short text to acknowledge the contributions of specific colleagues, institutions, or agencies that
77 aided the efforts of the authors.

SUPPLEMENTAL DATA

78 Supplementary Material should be uploaded separately on submission, if there are Supplementary Figures,
79 please include the caption in the same file as the figure. LaTeX Supplementary Material templates can be
80 found in the Frontiers LaTeX folder.

DATA AVAILABILITY STATEMENT

81 The datasets [GENERATED/ANALYZED] for this study can be found in the [NAME OF REPOSITORY]
82 [LINK].
